

Corporate Mission

Paragon Software, Smart Handheld Device Division (SHDD), has been at the forefront of the personal communications industry and has worked arm in arm with those who inspired the personal device revolution. From their advanced PenReader hand-writing recognition software, through personal productivity applications for mobile devices, the company has pursued its far-reaching goals, vigorously. Paragon Software (SHDD) established itself as an industry leader, early and continues to be one of the leading innovators in this technology sector.

Our mission

To adapt the increasingly advanced potential of today and tomorrow's smart handheld devices for easy use by consumers and corporations.

Values

To justify the company's name 'Paragon', we are guided by 5 underlying values that form the hardest foundation of our activity:

- **Responsibility**
We are inspired by our customers and partners' trust to provide them with approved solutions, professional services and efficient results. We are committed to every customer and strive to build strong relationships with our partners, providing solutions and services that surpass all expectations.
- **Quality**
Paragon employs the most current and advanced technologies available. Quality is ensured during all phases of development, multilevel testing and through continuous improvement of the product-process lifecycle.
- **Flexibility and accommodation**
We have great confidence that the foundation of effective product management is intrinsic to the flexibility of technologies. Our product lines are under constant development, maintenance and improvement to better satisfy the requirements of the modern IT market's extremely rapid and unpredictable development.
- **All-inclusive**
We see it as an aggregate approach to everything we do: all-encompassing inner structure e.g. Production, Design, Q&A and Customer Support departments, diverse selection of languages and mobile platforms supported by our solutions.
- **Scientific character**
Our product development is based on scientifically intensive achievements in linguistic semantics, computational linguistics, natural language processing and Gestalt psychology.

Paragon Software (SHDD) attributes its market success to the strict adherence of these values.
